Safety Management System Overview

- You own and control worker data, eliminating reliance on outside vendors

- Safety and drug tests are all available online – you can link into your choice of vendors

- Reduces costs for drug and safety testing, allowing you to shop for best prices

- Produces revenue for your organization

- Contractors, Unions and Owners can log in and review up-to-date worker status

- Drug test and safety training authorizations are available online eliminating COC and other paper-based forms

- Secure-password-protected with multiple levels of access to confidential and encrypted worker data

- Provides detailed reports including fully automated general readiness reports by project, company, union and trade

- Provides integrated access control right at the jobsite via patented CRScan

- Integrates with your own drug test vendor

What is The Safety Management System (SMS)?

The Copper Range Safety Management System (SMS) is a fully-automated web-based system that stores, manages and retains worker data, in real time.

Our Safety Management System will allow your organization to seamlessly interact with business partners online including:

- Owners, Contractors and Unions

- Drug Testing Companies

- Safety Training Companies

- Background Screening Companies

- Access Control Companies

Other business partners can be added upon request.

Now worker compliance status is available online instantly. NO paperwork. NO delay.

Reducing the Friction of Data Exchange

Copper Range

Operational Benefits:

- 100% Web-based

- Support is available 24/7/365

- Minimal training required

- Ensures data security and protection

- The choice of who has access to your information is YOURS

- Different levels of users

- Provides key information where it is needed most – at the jobsite

- Provides an integrated environment for monitoring multiple registered sites and subjects

- Makes it easy to verify workers are compliant with drug testing, safety training and background screening BEFORE entering a facility, reducing the risk of on-the-job injury

About Copper Range

Copper Range Inc. specializes in developing data exchange solutions using the latest computer, Internet, cellular and communications technologies. Our middleware solutions operate independently of any one system's specific limitations and reduce the friction often encountered with data exchange. We also develop the appropriate interfaces, reports and views of the data, as well as hosting and managing the solution.

Our innovation, experience and technology allow companies to more efficiently communicate, collaborate and disseminate data across platforms, across industries, across town and around the world. Quickly. Easily. Cost-effectively.
